SECURITY DEPENDS ON US

The OZONE WHITE® system is not only a world-class device, but also a complex disinfection and cleaning system that supports basic hygiene. The system provides uniquely high-quality and real-time controllable disinfection and cleaning hygiene services.

"There is only real SECURITY with verifiability"-2021

OZONE WHITE®

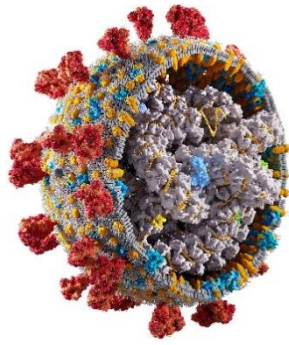

The essence of the ozone gas cleaning process.

The OZONE WHITE® system is a chemical-free disinfection process with ozone. Ozone gas (O_3) contains three oxygen atoms, while inhaled air contains two. When highly reactive ozone molecules come into contact with infectious microorganisms such as bacteria, viruses, mold, fungi, odor-causing elements, or dissolved oxidizable minerals, it simply destroys them or oxidizes them in the form of a precipitate, making them filterable. Oxidation occurs, during which these harmful particles are completely destroyed, while the ozone molecule is converted to oxygen (O_2) at the end of the chemical process. So there is nothing left but fresh oxygen-rich air after the treatment. Because ozone molecules in the air always find dust, dirt, pathogens, or "impact surfaces" to bind to themselves, depending on environmental variables, after about 45 minutes, most of them are converted back to oxygen after completing their cleaning task and disappear without a trace at the end of the process. Where the OZONE WHITE® system is used, 99.95% of microorganisms and viruses will be killed. Ozone gas is a modern prerequisite for cleaning activities, which allows perfect disinfection.

SARS-CoV2

OZONE WHITE® vs SARS-CoV2

The virus, including the coronavirus, is a small, independent particle made up of crystals and macromolecules. Unlike bacteria, the virus only multiplies in the host cell. The virus is therefore surrounded by a membrane made up of fatty substances (lipids) and proteins. One of the proteins in this membrane-like structure binds to human mucosal cells, and then the viral protein triggers the fusion of the mucosal cell and the viral membrane. This is how the virus's inheritance gets into our cell, where it can start to multiply when found on a host cell.

Some of the lipids surrounding the virus contain unsaturated fatty acids, which are injured in the presence of oxygen and damaged in the presence of ozone, which also fundamentally changes their physical properties. The virus dries out on contact with ozone, its structure is damaged, and within a short time it loses its infectivity and is inactivated. This process of destroying the virus is performed by ozone extremely quickly and neutralizes the virus. Viruses therefore have no protection or chance against the oxidizing effect of the disinfectant produced by the OZONE WHITE® system.

01

Ozone disinfection is so effective that microorganisms cannot build up immunity to it, unlike what can happen to conventional chemicals.

02

Ozone does not cause allergic reactions. The use of chemicals can cause allergic reactions and can lead to the development of chronic diseases. Ozone is a completely harmless, safe substance in this respect. No chemicals are required during the treatment with ozone gas, so the cleaning process is completely environmentally friendly. No chemical residues, just fresh, clean, oxygen-rich air.

03

The treatment with ozone gas is chemical-free, as the ozone generator produces the required ozone concentration from the air, which is converted back to oxygen during the treatment. The disinfecting effect of the gas produced and blown out of the air by the equipment is that the ozone molecules have a strong oxidizing ability, so they bind contaminants, pathogens, and odor molecules and then convert them into oxygen.

04

Ozone performs perfect disinfection. With the help of ozone gas released into the air, it can be reached surfaces that can no longer be disinfected with chemicals, and all this can be done extremely quickly with it.

*"It is necessary and indispensable in the future to establish a General Hygiene Protocol of international scale.
GHP*

This is one of the most difficult challenges of the future!"

January 2017

"The development of Ozone White® technology was preceded by four years of research and development. (Ozone White® pilot 2017-2020)

Unlike other technologies, Ozone White®'s fleet alone sends online data to RLOD®'s back-end system without intervention. As a result, the User, Machine Operator, and Manufacturer are registered in a single system, which makes Ozone White® technology unavoidable, real-time, and publicly controllable for anyone. The importance of the system was understood by the world in 2020! "

April 2020

MR. JÁNOS URAM
SBSA KFT. | SBSA LABORATORY LLC.
DIRECTOR | DIRECTOR

GHP

The basics of GHP are determined by three well-separated hygienic states.

- Personal hygiene..
- Community hygiene.
- Social hygiene.

Personal hygiene:

Individual hygiene is the sum of the individual hygiene habits of a community or social member.

Community hygiene:

A sum of individual hygiene habits that typically displays hygiene habits that point to a particular community.

Social hygiene:

A sum of several community hygiene habits that typically represent hygiene habits that point to a society.

SBSA
LABORATORY LLC

Elements of the OZONE

- The central element of the system is the OZONE WHITE® device, which develops ozone gas during its operation and has a disinfecting and cleaning effect. Another central element of the OZONE WHITE® system is the Registered List of Ozone Disinfection (RLOD® SYSTEM) computer system, which is a GSM 4G-based telecommunications and data recording system which has a downloadable application for both phones and tablets (OzoneControl) and it has a software directly available on the web for laptops and computers (MonitoringBook). Using the www.rlod.org interface, anyone who knows the exact address and contact information can check that in a specific place (restaurant, shop, hotel room, etc.) or on a given means of transport (taxi, train, bus, airplane, etc.) when was the last ozone disinfection. The system allows us to search for a specific hotel room number, exact store location, and the application shows what taxis, buses, trains, etc. are nearby which we can use to drive safely. Using www.rlod.org, you can see from the other side of the world whether the hotel you want to stay in, the restaurant you want to eat in, or the concert hall, cinema or nightclub you want to go to, when, how often uses ozone disinfection. We can repeat this check immediately before using the service, so we can even check if the particular hotel room has been disinfected immediately before our arrival or the particular taxi before boarding.

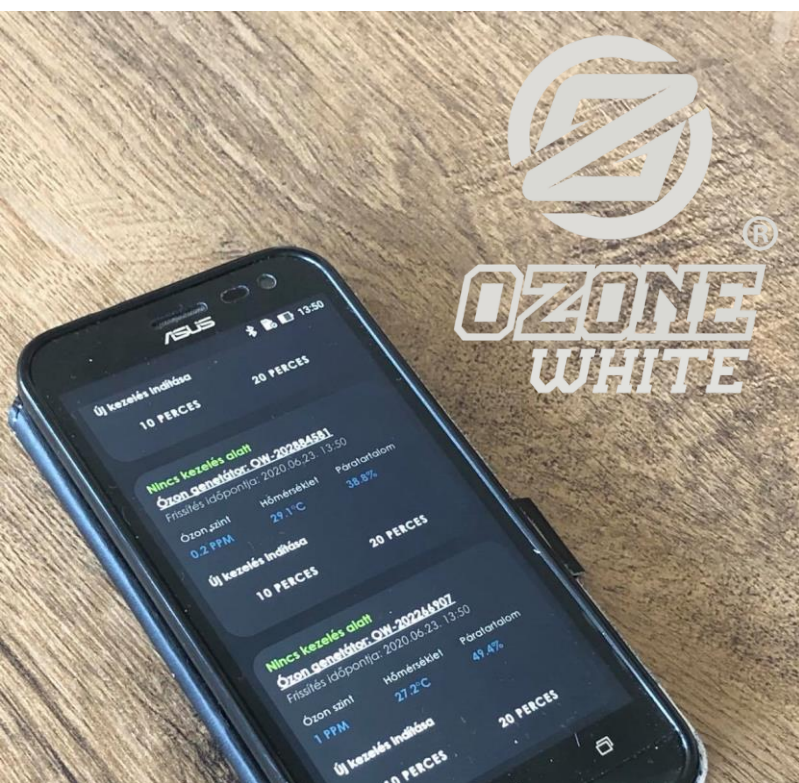

CONTROLLED

The equipment continuously measures and documents the amount of ozone emitted and the amount of ozone in the treated area, because the presence of the appropriate concentration of ozone released into the atmosphere and the maintenance of this concentration throughout the mechanism of action is essential for the effectiveness of the treatment.

DOCUMENTED

When an OZONE WHITE® device is switched on or terminated, the device provides data to the RLOD® SYSTEM via the GSM 4G system, which records all of the exact data of the performed treatment.

IN REAL TIME

The IT system sends the actual parameters and results of the applied treatment to the customer's e-mail address in the form of an e-mail message (PDF). With this, the system notifies the customer of the entire process immediately and in real time. This document also serves as the basis for the written certificate of performance.

SBSA
LABORATORY LLC

WHY OZONE WHITE® ?

Practical and comfortable to use. The ozone used for disinfection and cleaning is produced by the OZONE WHITE® device. The equipment takes up little space, is easy to transport and move. Using several devices together, any room of any size, even the entire sales area of hypermarkets, can be disinfected at the same time. This provides customers with unique time, cost, and work organization optimization.

Perfect cleaning result. The OZONE WHITE® equipment kills airborne viruses (SARS-CoV2, SARS, MERS, flu) and also the harmful microorganisms, bacteria, spores and molds with 99.95% efficiency and eliminates unpleasant odors and germ formation.

OZONE WHITE® ozone treatment is safe, chemical-free and environmentally friendly. The cleaned, disposed dirt practically decomposes (turns) into oxygen and mixes in the air, and after a ventilation it leaves as air.

The OZONE WHITE® is a specialist in industrial-sized areas, no other portable device can be used in rooms with a large area and ceiling height with the same treatment efficiency.

OZONE WHITE® SERVICE

The advantage of Ozone White® technology over competitors is that it eliminates human influence from risks. The equipment is operated only and exclusively by trained operators using an IT system with a unique identifier. Equipment used with Ozone White® technology is not commercially available. Ozone White® technology providers always provide the same high quality service to customers.

OZONE WHITE® RECOMMENDED

Where it is important to employ and greet employees and customers in an infection-free environment. Where it is important that disinfection takes place in the shortest possible time and the treated area can be used again within a short time. Where it is important to have a certificate of performance for disinfection approved by the tax office.

Because authentic documentation is important. Thanks to the applied technology and the outstanding disinfecting properties of ozone, we can document the success of the treatment with accurate measurement data. In all cases, a certificate is issued on the treatment performed, and an official measurement report is prepared, which can be checked online at the official website www.rlod.org.

Because efficiency is important. Complete and perfect coverage during the disinfection. Ozone gas reaches the smallest point of the room, every little corner. Reaches places which are not accessible with conventional cleaning products and tools (shower tray drains, grate drains, cabinets, machines, covered areas behind radiators, etc.).

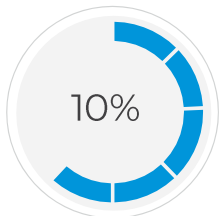

Because authentic information is important. Data from the Ozone White® system can be searched by anyone using the RLOD® system, whether it is searched with a mobile or with a tablet. www.rlod.org

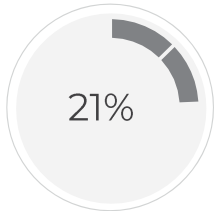

WE CAN REDUCE THE RISK!

We have heard many times, "if I had known"

On international trips, 10% of passengers get sick from some infectious disease!

21% of sick travelers need hospital care!

Using OZONE WHITE® technology

Using Ozone White® technology, 99.95% of microbiological contaminants are killed.
The results are confirmed by laboratory tests and efficacy studies.

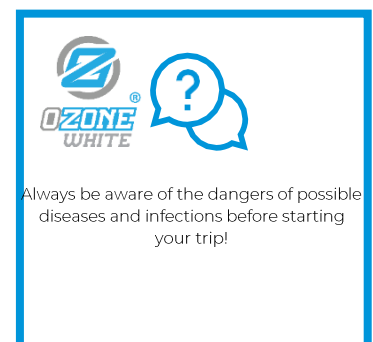

99,95%

Before traveling, check the hygiene protocol in your accommodation. Check in the RLOD® SYSTEM which vehicles and hotels are using Ozone White® technology. www.rlod.org

Look for the official RLOD® certificate or its official sticker during your travels. Check the unique ID number on the public interface! www.rlod.org

Always be aware of the dangers of possible diseases and infections before starting your trip!

OZONE WHITE® TECHNOLOGY PROVIDES OUTSTANDING

PERFORMANCE The OZONE WHITE® system provides and represents the highest standards. The most important aspect when using an ozone device is performance. The OZONE WHITE® device is capable of outstanding and unique performance among portable devices. The OZONE WHITE® device is the result of a military technical development, so it represents the highest premium standard in its technology. While other portable devices on the market are only suitable for disinfecting a small room or car, the OZONE WHITE® device is specifically suitable for disinfecting high-ceilinged, large-area rooms or healthcare facilities.

Igazolás tárgya:

Ozone White 9th – termelési kapacitás: 90g/h – ózongenerátor készülék csíramentesítő hatásának igazolása

A Markhot Ferenc Kórház 2020.04.05-től használja a Ozone White 9th – termelési kapacitás: 90g/h – készüléket COVID-19 gyanús és COVID-19 pozitív beteg ellátása során viselt FFP2 maszkok és overallok csíramentesítésére.
A csíramentesítést követően az FFP2 maszkokat és overallokat a betegeket ellátó személyzet újra védőeszközként használja.
Az eljárás teljes biztonságát az igazolja, hogy ellátott betegtől olyan személy, aki ezeket a csíramentesített védőeszközöket viseli nem fertőződött meg.

Mindezek alapján biztonsággal kijelenthető, hogy az Ozone White 9th – termelési kapacitás: 90g/h – eszközzel végzett csíramentesítés 100%-ban hatásos.

Eger, 2020.10.22.

LABORATORY LLC

D. Raúl García Neyi, Con Dni 43822107 T en calidad de Administrador Único de la empresa Salvaseer S.L con CIF B38766960 con domicilio en Santa Cruz de Tenerife y dedicada al transporte de enfermos y accidentados por carretera y a la gestión de emergencias sanitarias.

Certifica Que la empresa OzoneWhite presta sus servicios de desinfección para nuestras ambulancias, vehículos e instalaciones desde el año 2018 hasta la fecha, siendo MUY ALTO nuestro grado de satisfacción en las relaciones comerciales.

Consideramos que es una empresa MUY recomendable por su profesionalidad, eficacia, rápida respuesta, garantías, registros y gran predisposición.

A parte de nuestro trabajo habitual y ante la emergencia sanitaria por el virus covid-19 hemos requerido unos servicios extraordinarios, obteniendo una respuesta INMEDIATA, desplazando un equipo con una serie de máquinas al otro lado de la isla de madrugada para Garantizar nuestra seguridad y la de nuestros usuarios.

Por lo que antecede no dudo en recomendar a la empresa OzoneWhite, siendo nuestro grado de satisfacción el más alto posible.

En Santa Cruz de Tenerife a 08 de Abril de 2020

Raúl García Neyi

Administrador Único

”

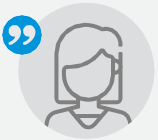

*“The complete safety of the procedure is evidenced by the fact that a person who wears these sterilized protective equipment is not infected from the patient being treated.
Based on all this, it can be stated with certainty that the sterilization with the Ozone White 9th device - production capacity: 90g / h - is 100% effective.”*
HUNGARY, EGER 2020

ABOUT OZONE WHITE® TECHNOLOGY

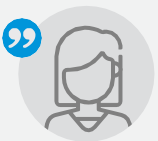

It's no longer enough to hang an A4 sheet of paper on the restroom wall to see who cleaned it here... That's not enough and I think everyone feels it, knows it... I need verifiable and authentic data!

Many have said many kinds of hygienic solutions. But did I use it well? I have no idea! With Ozone White® technology, it is not up to the operator to decide that everything has been done well.... I can see the measurements... there and then, I can check the data on the spot!

I used another ozone technology. To my greatest shock, Ozone White® technology provider said it was okay! I just have to know the dangers and what ozone is for. They are absolutely right because I did not know what I was doing and why.... Today I know what they are doing and of course I see it in the RLOD® SYSTEM...

Healthcare professionals are fully aware that the risk of infection is increased during the course of their work. Risk can be significantly reduced with a real-time controllable and effective system.

"We are constantly evolving and learning! We are working for a safer future! Because there is no perfect, only the ability to strive for perfection ..."

János Uram director of SBSA (Ozone White Team)

OZONE WHITE® & HYGIENE

Ozone White® technology and daily hygiene are most likely a jigsaw puzzle that embraces the whole world.

OZONE WHITE® TECHNOLOGY

It supports daily hygiene systems with the greatest possible efficiency.

GENERAL HYGIENE

Socially accepted characteristics of daily hygiene. If daily hygiene works according to high expectations, general hygiene also provides a high level of safety.

INDIVIDUAL HYGIENE

If we pay attention to the creation of individual hygiene, then the expected social hygiene is also significantly safer.

GHP

If the pieces of the puzzle fit properly, a General Hygiene Protocol will be established. The goal of Ozone White® technology is to create this state.

To be able to live our daily lives more safely, it is not enough to know a technology.

We have to apply it properly!

THE OZONE WHITE® SYSTEM'S AREAS OF USE

WHERE SAFETY IS IMPORTANT

It can be used in all places where a virus and pathogens free, clean environment and fresh air is required. The field of application of the ozone generator is inexhaustible, in today's world there are no households and institutions where they could not take advantage of the benefits of ozone treatment.

It is used in dental clinics, lung medicine and other medical treatments because it kills and destroys everything that hinders healing.

Ambulances, operating rooms, hospitals, healthcare facilities, medical and dental practices and their waiting rooms.

Shopping malls, high-traffic public spaces, hypermarkets and other shops.

Premises used for work, offices, industrial buildings, factories, warehouses.

Educational institutions, kindergartens, nurseries.

Deodorization of venues, restaurants, catering units, kitchens, factory of food industry.

Post offices and pharmacies.

Premises used for customer reception.

SIGNIFICANT ADVANTAGE IN PROTECTION AGAINST DISEASES

In the 2020 (SARS-CoV2) pandemic, ozone has an enormous importance. Ozone disinfection in workplaces, educational institutions, kindergartens, nurseries helps to prevent the infection from spreading through a group, workplace or school community, department.

IT ALSO DISINFECTS SURFACES

It not only disinfects the air, but e.g. the walls, the tables, the chairs, the beds, the pillows, the toys, the handles, so all the surfaces where the ozone gets to. In the evening, after the institutions are closed and are used OZONE WHITE® technology, for the morning, ozone destroys viruses and bacteria in the rooms and public spaces, thus preventing the spread of diseases and infections.

Public transport, taxis, trains, buses.

For disinfection and deodorization of car interiors as well as van and truck cargo holds.

For disinfection of air conditioners, air conditioning systems and equipment.

Hotels, apartments, pensions, guest houses.

AZ OZONE WHITE® OW9TH™

The OW9TH™ is the ninth generation of Ozone White® technology. Its efficiency and "intelligence" make it a world-class product.

OPERATORS

Each operator operates the OW9TH™ through their own and registered accounts.

SAFETY

The OW9TH™ equipment sends data to the IT system independently, so each phase operates under control.

DOCUMENTED

Every start-up of the OW9TH™ is documented in an unavoidable, authentic and traceable way.

REALLY IMPORTANT

Today, there are plenty of new infections that are difficult, if not impossible, to control. SARS-CoV2 is a good example of how a dangerous virus can paralyze the whole world in a matter of weeks. Nowadays, everyone travels everywhere, so viruses and infectious diseases appear in all parts of the world in days. Whether the passenger comes from the other side of the world or travels domestically, in the surfaces of the rooms and common areas (bed, sofa, armchair, carpet, curtain, bedside table, shelf, night light switch, remote control) can retain traces of numerous illnesses and infections. Constant attention is needed.

Defense is a key, which everyone must do on their own. The best and most effective tool in this personal protection is the OZONE WHITE® system, which optimally complements the everyday cleaning activities. It provides security, alongside of the good feeling of cleanliness.

OZONE WHITE® T3-C3

The Consciously Clean Village Program (T3) is a comprehensive general hygiene implementation and control program for Hungary and the candidate countries. It aims to provide a real-time, continuous view of the hygienic condition of public spaces used by society through a credible database, as well as to provide immediate and continuous intervention to minimize biological risks.

TRANSPARE

Transparent hygiene protocol with the help of GHP.

INEVITABLE

The established hygiene protocol must be documented without human intervention.

SAFE

The established hygiene protocol must be environmentally friendly, effective and safe.

VERIFIABLE

The established hygiene protocol must be public and authentically verifiable.

VALUE OF THE HYGIENE INFORMATION

The Ozone White® technology and its associated RLOD® registration system go beyond its preventive health and social nature and are suitable for simple and understandable communication. Thanks to the registration system, anyone can immediately check the hygiene information that concerns or interests them. The value of this information has been demonstrated by the experience of 2020, and we believe that the significance of this data has been underestimated in the past.
